

# THE IMPACT OF TIME MANAGEMENT BEHAVIORS OF FIRST-YEAR SOCIAL SCIENCE STREAM STUDENTS AND THEIR ACADEMIC ACHIEVEMENTS

Mohammed Saleh, Qatar University, Doha, Qatar

## ABSTRACT

*In the advanced world, time is viewed as an endlessly detachable and usable product. It assists with mixing the idea of time through the establishment. Every one of the material and HR moved by associations can be improved throughout time or be changed over the long haul; yet the main resource that can't be changed or bought or put away is time itself. The key to making progress in life is adequately dealing with this asset that everybody has similarly and paying adequate accentuation to arranging. Though viable and proficient utilization of time shifts regarding the errands played out, the further expansion in the degree of information and abilities anticipated from current workers has additionally expanded the need of time arranging. The way to achievement in public activity goes through viable and proficient working which is just conceivable by means of using time productively. The cutthroat climate we live in today supports individuals from as ahead of schedule as their rudimentary schooling to design and oversee time adequately. The elite presentation needed by cutthroat conditions powers associations and chiefs to utilize time adequately and specifies the inquiry to control time.*

## INTRODUCTION

Time is perhaps the most significant asset that require cautious arranging and the executives to be viable and fruitful throughout everyday life (Hoover, 2007). Concerning this, the cutthroat conditions we live in today urge individuals to design and oversee time viably. To reinforce this thought, Tracy called attention to that all effective time directors are additionally acceptable organizers. In any case, in the space of globalization, helpless time usage costs in numerous ways. Along these lines, individuals can profit from evaluating how to deal with their time viably (Hailu A, 2012).

In spite of the fact that using time productively is vital for everybody, it is critical for advanced education understudies who need close oversight and observing from guardians. Concerning connection between using time productively and scholarly accomplishment, the examination finding of Tesfaye shows that understudies who are acceptable in using time effectively are likewise acceptable in their scholastic accomplishment (Alsalem, 2017) additionally, numerous analysts discovered that understudies' time usage practices have a positive relationship with scholastic accomplishment.

In spite of the fact that using time productively is vital for everybody, it is critical for advanced education understudies who need close oversight and observing from guardians. Concerning connection between using time productively and scholarly accomplishment, the examination finding of Tesfaye shows that understudies who are acceptable in using time effectively are likewise acceptable in their scholastic accomplishment. Additionally, numerous analysts Khanam, Sahu discovered that understudies' time usage practices have a positive relationship with scholastic accomplishment.

Be that as it may, numerous college undergraduates whine about a lack of time when they are approached to finish tasks and other learning exercises as a necessity of subjects. Concerning this, analysts have been intrigued to examine factors that influence college undergraduates' using time effectively. For example, research directed by Kocabas and Erdem brought up (i.e., staring at the TV, listening radio, dozing, and superfluous talking are factors that influence college undergraduates time usage practices. Essentially, Hoover noticed that such a large number of messages and phone can be a calamity for powerful using time effectively. As indicated by Forsyth factors incorporate crises, short breathers, phones, online media (Facebook and informing), and messages. Exploration led by Alemu on college undergraduates showed that helpless using time productively came about because of interference by visiting companions, getting calls, and commitment in friendly exercises (Cemaloglu N, 2010).

Notwithstanding factors influencing using time effectively, specialists were additionally intrigued to see whether there is a sexual orientation contrast in using time productively or not. For instance, research directed by Khanam saw as that there was a slight distinction among female and male members in the mean scores of general using time effectively. The examination finding showed that guys scored more noteworthy overall using time effectively and short-range arranging though females scored better in long-range arranging and time disposition. Essentially, connection research led on time usage abilities, scholastic accomplishment, and scholarly life fulfillment by Khatib uncovered that in the exemption of short-range arranging, there was a measurably huge sexual orientation distinction overall using time effectively, long-range arranging, and time mentality. In his examination finding, he presumed that the score of female undergraduates was higher than male undergraduates. This examination finding was likewise united by the exploration finding of Alsalem demonstrated that female undergraduates announced more prominent time usage abilities than male undergraduates.

Be that as it may, there was disconnected examination finding where male undergraduates have better scores in time usage practices than female. Also, there was as yet another inconsistent examination finding showing that there was no huge distinction in using time productively among female and male undergraduates. A comparative examination result was found by Pehlivan who expressed that there was no huge sex variety in mean scores of general using time effectively, short-range arranging, and time mentality however sex distinction was seen in long-range arranging (Forsyth P, 2007).

As it is demonstrated in the previously mentioned conversations, in the current writing, there are incongruous exploration discoveries in regards to sex and time usage practices. These inconsistencies demonstrate the significance of directing further exploration.

Other than the interest in sexual orientation contrast, analysts were additionally intrigued to concentrate on whether there was a distinction in time usage practices of undergraduates dependent on family instruction status and neighborhood or not (Gayef A, 2017). For instance, Gayef discovered that there was no critical distinction between using time effectively subscales mean scores dependent on family instructive status. Furthermore, correlational examination was led by different scientists to see whether undergraduates' time usage conduct corresponds with their neighborhood or not. The examination result showed that there was no measurably huge connection between time usage practices and neighborhoods.
